

Preventing Problems, Reacting Less

Build practical systems that identify risk, recurring issues and warnings before they cause disruption

Many businesses operate in a cycle of reacting to problems after they occur. Incidents, audits, supplier failures and equipment breakdowns become the trigger for action rather than the result of missed warning signs. We help organisations build risk management, monitoring, root cause analysis and supplier assurance directly into day-to-day operations, supported by practical digital tools that make prevention part of how the business works.

3-5x

THE COST OF REACTIVE WORK
versus the same work done as planned prevention

47%

OF UK BUSINESSES HAVE SEEN AN INCREASE
in supply chain disruption in the past 12 months

48%

FORMALLY ASSESS AND MITIGATE DISRUPTION
from their supply chain in their continuity planning

How we help

The Problems REACTIVE

Surprises found in audits

The finding is the first you hear of it - no report suggested it could be a problem

Issues surface as failures

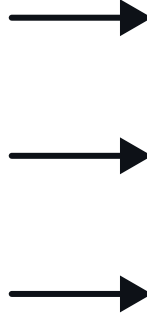

No early warning signs or alerts. No chance to proactively stop it

Teams fix individual events

Limited awareness or structure to fix the underlying causes

Data exists but doesn't predict

Reports look at history but don't have any warning flags when things get worse

The Benefits PROACTIVE

Less Margin Erosion After Fixing Issues

Solution: Cost of Poor Quality recording and reporting tools highlighting hot-spots and enabling reductions

Everyone Managing Risks

Solution: Risk management built into systems, everyone understands how their role manages risk

Real Operational Data

Solution: Reports that tell you what is happening in your business and highlight early warnings.

Improvements That Make Real Change

Solution: An improvement framework which turns the issues into permanent improvements

Ask Yourself

- Q. Would you find out about a recurring problem from a predictive trend analysis, or a repeat conversation?
- Q. Do your best people spend more time fixing things than preventing them?

Why Clients Choose LSS

Operations Experience with Digital Expertise

We understand that operational problems are rarely isolated events. We build practical systems that identify, analyse and respond to emerging risks.

Fix the cause. Not the consequence.

Knowledge and Digitisation Combined

We enhance the Microsoft tools you already own, to transform risk information into actionable insights. Not more data - earlier intervention.

Early warning. Built into the workflow.

Our Focus on Business Outcomes

We help you reduce recurring problems and identify emerging trends. You become more resilient and less dependent on individual heroics.

Resilient by design. Not by luck.

EXAMPLE APPLICATION

A Cost of Poor Quality system which highlighted lost margin

It was recognised that margin was being eroded by activities that did not necessarily get flagged in audits or through non-conformance. We developed and implemented a Cost of Poor Quality (COPQ) framework to make quality-related losses visible, measurable and actionable. The solution introduced standardised rework and downtime categories, integrated time-booking from the ERP system and included material, warranty and compensation costs, giving the ability to highlight areas requiring investigation and action.
