

Better Visibility, Better Decisions

Establish a clear, reliable view of business performance,
decisions based on evidence, not assumptions

You might already have the data you need, but is it spread across multiple systems, duplicated in spreadsheets and reported too late to influence decisions? LSS helps organisations consolidate information, automate reporting and create meaningful business intelligence using Microsoft technologies, giving you the visibility you need to identify risks, improve performance and make better decisions with confidence.

15-25%

OF ANNUAL REVENUE LOST
to poor data quality

88%

OF SPREADSHEETS CONTAIN ONE MATERIAL ERROR
some will contain many more

~1/3

OF EXECUTIVES TRUST THEIR DATA
enough to act on it

How we help

What problems do we solve?

- Data exists in multiple places, no single source of truth
- Teams enter the same information in multiple places
- Reliance on outdated reports and incomplete data
- KPIs describe what happened but fail to drive action
- Critical business information trapped in spreadsheets
- Long-term business risk/viability is hard to assess
- Decision-making is too reliant on personal judgement

Business Benefits

1. Enables Faster, Better Decisions
2. Reduces Waste and Operating Costs
3. Identifies Risks Before they Impact You
4. Supports Output Ownership and Accountability
5. Strengthens Compliance and Audit Readiness

Ask Yourself

- Q. Could you state your current risk exposure without consulting multiple sources or convening a meeting?
- Q. Would two people in your business give the same answer if asked 'how are we performing?'

Why Clients Choose LSS

Operations Experience with Digital Expertise

We help you capture knowledge in the context
of how your business actually operates

Protecting what your business depends on

Knowledge and Digitisation Combined

We work with you to understand what
information is genuinely needed to run the
business and build tools around that

Practical Insight, not reporting noise

Our Focus on Business Outcomes

Our goal isn't just better documentation;
it's helping you build a stronger, more
resilient business.

Making you process-driven. Not person-dependent.

EXAMPLE APPLICATION

An intelligent management system people want to use

A Services company predicting further growth reached the conclusion it could no longer depend entirely on the experience of key team members. Current management system documentation was hard to find and much of it lived on employee desktops. A SharePoint-based system was developed, using out-of-the-box functionality to tag documents and control access; this was paired with visual flows enabling employees to find processes and links to systems. An AI agent was layered over the top so they could ask questions without the need to read full documents.
